Specifications

Production Capacity: 70,000L/day

Coagulation & precipitation tank: 200L x 2

Filtration unit :

Filtration cotton and the hollow-fiber unit.

Storage tank: 1,000L

Accessories : Generator (3-phase200V4.5KW)

Pump (head 10M380L/min)

Hose30m

Weight: When empty250kg/full 1800kg

Outrigger:

In work, it supports weight by the outrigger.

POLY-GLU MOBILE WATER TREATMENT DEVICE

This Mobile Water Treatment Device is used to purify water at a nearby place of source water and to supply the purified water to the water tanks installed at various convenient places for the community people. The Device is so light that it can be carried to the nearest of source water by only 3 persons or by a donkey. A vehicle or a motorbike may be used to carry it to a remote area. It can be packed up compactly while moving it from one place to another.

Electricity generator can also be equipped in it in case of unavailability of grid electricity. Very special filter is used to ensure high quality of potable water.

This POLY-GLU DEVICE is so simple that a local staff can learn its operation, inspection, repairing in a training for only one day. Maximum production capacity is 3,000 liter per hour.
